**ABSTRACT:** *Jasminum* L. comprises about 200 species in the world including 5 sections: *Jasminum* Green, *Alternifolia* DC., *Trifoliolata* DC., *Primulina* Green and *Unifoliolata* DC. they distributed in tropical and subtropical in South East Asia, Europa, Australia and Africa. Section *Trifoliolata* DC. was published by De Candolle (1844) with the typus *Jasminum didymum* G. Forst. and characterized by leaves 3-foliolate, terminal leaflet slightly larger than or equal to lateral leaflets or sometimes, lateral leaflets reduced. There are about 10 species and 5 subspecies in this Section in the world. In Vietnam, there are 1 species and 2 subspecies in section *Trifoliolata* DC. recorded. In this paper we introduced *Jasminum sinense* Hemsl. in sections *Trifoliolata* DC. as a new record for flora of Vietnam. This species is found in Ha Giang (Pho Bang) and has characteristic of *Trifoliolata* DC. section such leaves 3-foliolate. *Jasminum sinense* was closed to *Jasminum brevibolum* by lateral leaflets reduced, leaves and calyx pilose (different with *Jasminum lanceolaria* subsp. *lanceolaria* and *Jasminum lanceolaria* subsp. *scortechinii* by terminal leaflet slightly larger than or equal to lateral leaflets, leaves and calyx glabrous). But *Jasminum sinense* characterized by calyx lobes linear, 1-5 mm long. In this article, we introduce nomenclature, key to species, morphology and illustration, distribution and research specimen of three species of *Trifoliolata* DC. section (*Jasminum* L.) from Vietnam.

**Keywords:** Oleaceae, *Jasminum*, *Trifoliolata*, morphology, new record, Ha Giang, Vietnam.

### INTRODUCTION

*Jasminum* L. Comprises about 200 species in the world including 5 sections: *Jasminum* Green, *Alternifolia* DC., *Trifoliolata* DC., *Primulina* Green and *Unifoliolata* DC. they distributed in tropical and subtropical in South East Asia, European, Australia and Africa [4, 5, 7]

Section *Trifoliolata* DC. was published by De Candolle (1844) [1] with the typus was *Jasminum didymum* G. Forst. and characterized by leaves 3-foliolate, terminal leaflet slightly larger than or equal to lateral leaflets or sometimes, lateral leaflets reduced. There are about 10 species and 5 subspecies in this Section in the world. Green (2001) [5] research on this section in Australia, South East Asia and China had introduced 6 species, 2 varieties and 3 subspecies.

According to recent research, genus *Jasminum* L. in Vietnam has about 30 species [10] including 2 sections, viz: *Trifoliolata* DC. and *Unifoliolata* DC. and there are 1 species and 2 subspecies of section *Trifoliolata* DC.

recorder in Vietnam [3, 8, 9].

During studying specimens of this section in the Herbarium, we introduced *Jasminum sinense* Hemsl. with leaves 3-foliolate in sections *Trifoliolata* DC. as a new record for flora of Vietnam, this species had been recorded only in China (Fujian, Guangdong, Guangxi, Guizhou, Hubei, Hunan, Jiangxi, Sichuan, Taiwan, Yunnan, Zhejiang) [2]. The voucher of this species was kept in HN Herbarium. Thus, this section in Vietnam has 2 species and 2 subspecies, viz: *Jasminum brevibolum*, *Jasminum lanceolaria* subsp. *lanceolaria* and *Jasminum lanceolaria* subsp. *scortechinii* and *Jasminum sinense*. Nomenclature, a key to species, morphology and illustration of three species was provided.

### MATERIALS AND METHODS

Materials were vouchers of all species of *Trifoliolata* DC. section from Vietnam which were kept in Herbaria of Institute of Ecology and biological Resources (HN), Institute of Tropical Biology (VNMN), National Institute of

Medicinal Materials (HNPI), VNU University of Science (HNU), Kunming Botanical Garden (KUN), South China Botanical Garden (SCBG),

Herbarium of the Museum National d'Histoire Naturelle in Paris (P), and specimens collected from the field trips.

## RESULTS AND DISCUSSION

### Key to species of *Trifoliolata* DC. section (*Jasminum* L.) in Vietnam

- 1A. Lateral leaflets reduced; leaves and calyx pilose.
  - 2A. Calyx lobes linear, 1-5 mm long ..... **1. *J. sinense***
  - 2B. Calyx lobes shallow, triangular, 0.5 mm long ..... **2. *J. brevilobum***
- 1B. Terminal leaflet slightly larger than or equal to lateral leaflets; leaves and calyx glabrous ..... **3. *J. lanceolaria***
  - 3A. Corolla tube 17-25 mm long, fruit 8-9 × 7 mm ..... **3a. *J. lanceolaria* subsp. *lanceolaria***
  - 3B. Corolla tube 10-15 mm long, fruit 20 × 12 mm ..... **3b. *J. lanceolaria* subsp. *scortechinii***

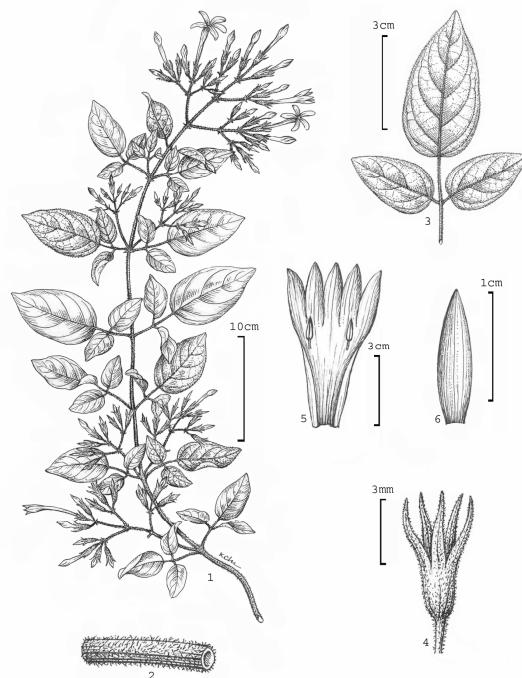

### Nomenclature and morphology of species of *Trifoliolata* DC. section (*Jasminum* L.) in Vietnam

#### **1. *Jasminum sinense* Hemsl. - Nhài hà giang** (Fig. 1)

Hemsl. in Forbes & Hemsl. 1889. J. Linn. Soc. Bot. 26: 80; M. Chang et al. 1996. Fl. China, 15: 316. - *Jasminum bodinieri* H. Lév. 1914. Repert. Spec. Nov. Regni Veg. 13 (355-358): 151-*Jasminum sinense* Hemsl. var. *septentrionale* Hand.-Mazz. 1936. Symb. Sin. 7(4): 1012 - *Lonicera cavalieri* H. Lév. 1912. Repert. Spec. Nov. Regni Veg. 11 (271-273): 31 - *Lonicera rehderi* H. Lév. 1911. Repert. Spec. Nov. Regni Veg. 10 (243-247): 145, not Merrill. 1904. Publ. Bur. Sci. Gov. Lab. 17: 50.

Vines twining, 1-8 m, branchlets terete, densely rusty villous. Leaves opposite, 3-foliate, lateral leaflets reduced; petiole 0.5-3.5 cm long; terminal leaflet ovate to ovate-lanceolate, 3-12.5 × 2-8 cm, rusty pubescent and more densely so along veins abaxially, base rounded or rounded-cuneate, apex obtuse, acute, to acuminate; primary veins 3-6 on each side of midrib; lateral leaflets 1.5-6.5 × 0.8-5 cm. Cymes congested to panicles, terminal or axillary, many-flowered. Flowers fragrant, pedicel 0-5 mm long. Calyx pilose; tube 2-3 mm long; 5 lobes linear, 1-5 mm. Corolla white or yellowish, salverform; tube 1.5-4 cm; lobes 5, oblong or lanceolate, 0.6-1.4 cm. Stamen 2, filament short, attach near throat; anther 3 mm. Fl. June-October, Fr.

September-May (next year).

Shrubs scandent, 1-5 m; branchlet slender, pubescent when young. Leaves 3-foliolate, lateral leaflets reduced; petiole 1-2 cm; terminal leaflet ovate or lanceolate  $6-10 \times 2.5-4.5$  cm, base rounded or truncate; apex obtuse to caudate, adaxial sparse pilose, abaxial densely pubescent; primary vein prominent abaxial, lateral 4-5 pairs, pinnately; lateral leaflet small,  $8-10 \times 5-6$  mm; base obtuse. Compound cymes terminal, many flowers, yellow pilose. Bract leafly, 1-2 cm long, branch bracts linear, 1 mm

long. Flower white, pedicel 2 mm long or not. Calyx tubular, funnel,  $5 \times 5$  mm; 5 lobes shallow, triangular, 0.5 mm long, pilose. Corolla white, salverform, tube 1.5-2 cm; 6 lobes, oval,  $5-6 \times 3-4$  mm. Stamen short, filament terete, 1 mm long; anther oval, 4 mm long. Gynoecium ovoid, 1.5 mm long, pilose; style terete, 1-1.5 cm, stigma 3.5 mm, bilobes. Berry, globose, 5-6 mm in diam. Seed 1. Fl. June-July, Fr. September-October.

**Loc.class.:** India, Nilgiris.

**Typus:** Perrottet s.n (HT: G; IT: K).

**Distribution examined:** Da Nang (Tourane), Gia Lai (Mang Yang), Ninh Thuan (Phan Rang). India.

**Specimen:** Gia Lai, PTV 1018 (HN), VK 4426 (HN). - Ninh Thuan, B. H. Quang 52 (HN).

**3. *Jasminum lanceolaria* Roxb. — Nhài thon, Nhài măc, Ba ro.**

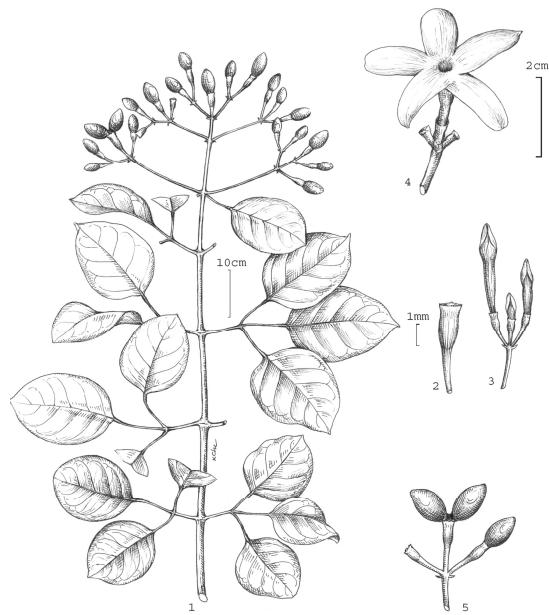

Roxb. [1814, nom. nud.] 1820. Fl. Ind., ed. 1820 1: 97; Phamh. 2000. Illustr. Fl. Vietn. 2(2): 891, fig 7588; P. S. Green, 2000. Fl. Thailand, 7(2): 327; T. D. Ly, 2003. Checkl. Pl. Sp. Vietn. 2: 1164 ["*lanceolarium*"]; M. Chang et al. 1996. Fl. China, 15: 314.

**3a. *Jasminum lanceolaria* subsp. *lanceolaria* P. S. Green. - Nhài thon (Fig. 3)**

P. S. Green, 1995. Kew Bull. 50. (3): 575; P. S. Green, 2000. Fl. Thailand, 7(2): 327.

Shrubs scandent, 10-15 m; branchlets terete, glabrous or pubescent. Leaves opposite or nearly so, 3-foliolate; petiole 1-4.5 cm, glabrous to puberulent; terminal leaflet with petiolule 0.5-4.5 cm; leaflet blade elliptic, ovate, to lanceolate, rarely suborbicular,  $3.5-16 \times 1-9$  cm, leathery, base rounded or cuneate, apex obtuse to caudate; primary veins obscure, lateral 5-7 on each side, very obscure. Compound cymes often paniculate, terminal or axillary, many flowered; bracts linear, 1-5 mm, branch bracts scale. Flowers fragrant, pedicel 0-5 mm long. Calyx cup, glabrous, 2 mm long; lobes deltate, 0.1-0.5 mm long. Corolla white, salverform; tube 1.7-3.5 cm; lobes 4 or 5, lanceolate to oblong,  $12-14 \times 3-4$  mm. Stamen 2, filament short, attach near

throat, anther 5.5 mm long. Gynoecum cylinder, 0.5 mm long; style terete, 4-6 mm long, stigma 3 mm. Berry black, drying orange-yellow, ellipsoid, 8-9 × 7 mm. Fl. April-August. Fr. June-March (next year).

**Loc.class.:** India, Khasia.

**Typus:** Griffiths in Herb. E. Ind. Co. 3715  
(NT: K).

**Distribution:** Hoa Binh (Mai Châú), Lao Cai (Bac Ha), Cao Bang (Nguyên Bình), Ninh Bình (Cuc Phuong), Quang Tri, Da Nang (Tourane), Lam Dong (Da Lat), Dak Lak (Dak Mil), Dak Minh. India, Mianma, China.

**Specimen examined:** Hoa Binh, Phuong 1946 (HN); Phuong 3568 (HN); HNK 780 (HN); CP 1451 (HN). - Cao Bang, CBL 1246 (HN). - Dak Lak, Dung 448 (HN). - Quang Tri Petelot 10306 (VMN). - Thua Thien - Hue, Poilane 1942 (VMN). - Bien 1251 (HN). - Dong Nai, Pierre 1942 (VMN).

### 3b. *Jasminum lanceolaria* subsp. *scortechinii* (King & Gamble) P. S. Green. - Nhài lá mỏng

P. S. Green, 1995. Kew Bull, vol. 50. No. 3, p. 576; P. S. Green, 2000. Fl. Thailand, 7(2): 312. - *Jasminum scortechinii* King & Gamble, 1906. J. As. Soc. Beng. 74 (2): 264.

Different with type subspecies by leaves thin. Calyx small, calyx lobe short, 0.1 mm long or not. Corolla tube 10-15 mm long; 7 lobes, 8-12 mm long. Ather 3 mm, appendage 0.5 mm. Gynoecum small, 0.5 mm long; style 14-30 mm long, stigma 3-4 mm long. Berry ellipsoid, 20 x 12 mm. Fl. August-September; Fr. October-December.

**Loc. class.:** China. Hong Kong.

**Distribution:** Cao Bang (Nguyen Binh), Lao Cai, Thua Thien - Hue (Bach Ma), Kon Tum, Gia Lai (K' Bang), Dak Lak.

**Specimen examined:** Cao Bang, Bien - Do 43 (HN). - Lao Cai, Petelot 5886 (VMN). - Thua Thien - Hue, N. T. Nhan 750 (HN); T. D. Dai 315 (HN). - Gia Lai, KNP 977 (HN); B. H. Quang 50 (HN); VK 741(HN). - Kom Tum, DKH 4709 (HN). - Dak Lak , Dung 414 (HN); Bien 1038 (HN); T. D. Ly 714 (HN).

### CONCLUSION

There are 2 species and 2 subspecies of *Trifoliolata* DC. (*Jasminum* L.) in Vietnam including 1 new record for flora of Vietnam (*Jasminum sinense* Hemsl.).

The morphological characteristics such: lateral leaflets reduced or present; leaves glabrous or pilose; calyx glabrous or pilose; calyx lobes shallow, triangular or deeply, linear; lenght of corolla tube and side of fruit was used to identify the species.

Distribution and studied specimen of each species were cited.

<sup>2</sup>Bảo tàng Thiên nhiên Việt Nam, Viện Hàn lâm KH & CN Việt Nam

**TÓM TẮT**

Trên thế giới, chi *Jasminum* L. có khoảng trên 200 loài được chia thành 5 nhánh *Jasminum* Green, *Alternifolia* DC, *Trifoliolata* DC, *Primulina* Green và *Unifoliolata* DC. có phân bố ở các vùng nhiệt đới và cận nhiệt đới ở Đông Nam Á, châu Âu, châu Úc và châu Mỹ. Nhánh *Trifoliolata* DC được De Candolle (1844) công bố với loài chuẩn là *Jasminum didymum* G. Forst. với đặc điểm hình thái, lá kép 3 lá chét, 2 lá chét bên bằng hoặc gần bằng lá chét hay 2 lá chét bên tiêu giảm. Trên thế giới, nhánh *Trifoliolata* DC. có khoảng 10 loài và 5 dưới loài. Ở Việt Nam đã ghi nhận được có 1 loài và 2 dưới loài thuộc nhánh *Trifoliolata* DC.

Trong quá trình nghiên cứu mẫu tiêu bản và tài liệu chi này ở các phòng tiêu bản Việt Nam, chúng tôi đã phát hiện loài *Jasminum sinense* Hemsl. thuộc nhánh *Trifoliolata* DC. là loài mới, bổ sung cho hệ thực vật Việt Nam, loài này phân bố ở Hà Giang (Phó Bảng) có đặc điểm đặc trưng của nhánh *Trifoliolata* DC. là lá kép có 3 lá chét. Loài *Jasminum sinense* gần với loài *Jasminum brevibolum* bởi lá có lông, lá chét bên nhỏ hơn nhiều so với lá chét ở giữa, dài có lông (khác biệt với 2 dưới loài *Jasminum lanceolaria* subsp. DC.

*lanceolaria* và *Jasminum lanceolaria* subsp. *scortechinii* có lá nhẵn, lá chét bên gần bằng lá chét giữa, dài nhẵn). Tuy nhiên loài *Jasminum sinense* khác biệt bởi dài xẻ sâu, thùy dài hình sợi, dài 1-5 mm.

Trong bài báo này, chúng tôi giới thiệu danh pháp, xây dựng khóa định loại và mô tả chi tiết, hình vẽ, trích dẫn phân bố và mẫu nghiên cứu ba loài trong nhánh *Trifoliolata* DC. thuộc chi *Jasminum* L. ở Việt Nam.

Từ khóa: Oleaceae, *Jasminum*, *Trifoliolata*, *Jasminum sinense*, ghi nhận mới, Hà Giang, Việt Nam.
